

CLEANING AND SELF CLEANING AUTOMATIC FILTERS

Automatic cleaning and self-cleaning filters model BRAVOMAX A, BRAVOMATIC and PULIMATIC are 'protection-filters' specifically designed and realized for the protection of waterworks plants against coarse materials (rust oxide, limescale flakes, and small stones), which can be present in drinking water supplied from the water main.

Therefore, automatic cleaning and self-cleaning filters model BRAVOMAX A, BRAVOMATIC and PULIMATIC are not suitable for the filtration of water containing high quantities of suspended materials (algae, lime) and sediments materials (sand), as well as well water. For the treatment of this kind of problematic waters specific filters (like the FLM models) are available, therefore a focused evaluation is recommended.

Warning! Acqua Brevetti srl does not suggest the installation of the filters model BravoMAX A, BravoMATIC, PuliMATIC in waters different from the one supplied from the water main. It is informed that the conventional guarantee of the filter stops in case of non-compliant installations.

In case of doubt, please consult Acqua Brevetti's Technical Department.
